Adiga, K. C., 241
Allen, W., 205

Babrauskas, V., 135
Beard, A., 193
Beever, P. F., 191
Bhatnagar, H. L., 151
Bill, Jr., R. G., 113, 189

Cheng Yao, 65
Chohan, R. K., 167
Collins, L. A., 143

Drysdale, D. D., 179

Evans, D. D., 33

Fleming, R. P., 75

Galloway, F. M., 251
Gur, I. S., 151

Hall, Jr., J. R., 25
Heskestad, G., 113, 189
Hinkley, P. L., 221
Hirschler, M. M., 251
Hoogendoorn, C. J., 287

Jensen, R., 1
Johnson, P. F., 13

Kaur, B., 151
Kleijn, C. R., 287

Leonard, J. T., 47

Melinek, S. J., 89, 127, 191

Paul, K. T., 269
Prahl, J. M., 101

Ramaker, D. E., 241
Roberts, D. L., 143
Robinson, D. A., 5

Scheffey, J. L., 47
Stroup, D. W., 33

Tatem, P. A., 241
Theobald, C. R., 89, 191
Thomson, H. E., 179
Thorne, P. F., 89

Upadhyaya, B. R., 167

van de Leur, P. H. E., 287

Wendt, B., 101
Williams, F. W., 241

Subject Index

AFFF protection
for weapons staging areas, 47
Alarm system design
fire, implications for: sound attenuation in buildings, 5
Annual Fire Research Lecture
fire and the architect — the communication problem, 205

Bed assemblies
fire testing of, of reduced flammability, 269

Chars
studies on the, of flame-retardant phosphorylated cotton fibres containing transition metal ions, 151
Computer fire models
use of, for analyzing thermal detector spacing, 33
Computer industries
telecommunications and, very early smoke detection for, 13
Conduction effects
quantification of thermal responsiveness of automatic sprinklers including, 113
Cone calorimeter
smoke and gas evolution rate measurements on fire-retarded plastics with the, 135

Detection
fault, and safety in process control systems and sensors, 167
very early smoke, for computer and telecommunications industries, 13
Detector spacing
thermal, use of computer fire models for analyzing, 33
Detectors
why (they) don't operate — a growing problem, 25
Discharge distribution performance
for an axisymmetric model of a fire sprinkler head, 101

ESFR sprinkler system
development of, 65

Fire alarm system design
implications for: sound attenuation in buildings, 5
Fire models
computer, use of, for analyzing thermal detector spacing, 33
Fire protection engineering
technology of: the ultimate challenge of our profession, 1
Fire Research Lecture
annual; fire and the architect — the communication problem, 205
Fire resistance
prediction of, of insulated steel, 127
Fire safety
are parents learning, from their children?, 143
Fire sprinkler head
discharge distribution performance for an axisymmetric model of a, 101
Fire testing
of bed assemblies of reduced flammability, 269
Fire-retarded plastics
smoke and gas evolution rate measurements on, with the cone calorimeter, 135
Firepoint
critical mass flux at the; flammability of plastics II, 179
Flame-retardant fibres
phosphorylated cotton, studies on the chars of, containing transition metal ions, 151
Flames
gas, modeling pool-like, of propane, 241
Flammability
of plastics II: critical mass flux at the firepoint, 179
reduced, fire testing of bed assemblies of, 269
Foam protection
aqueous film-forming, for weapons staging areas, 47

Hydrogen chloride
airborne, model for the spontaneous removal of, by common surfaces, 251

Insulated steel
prediction of the fire resistance of, 127

Phosphorylated cotton fibres
flame-retardant, containing metal ions, studies on the chars of, 151
Plastics
flammability of, II: critical mass flux at firepoint, 179
Process control systems
and sensors, safety and fault detection in, 167
Propane
modeling pool-like gas flames of, 241
Protection engineering
fire, technology of: the ultimate challenge of our profession, 1

QRS technology
applications/limitations of, 75

Removal
spontaneous, of airborne hydrogen chloride by common surfaces, a model for the, 251
Responsiveness
thermal, quantification of, of automatic sprinklers including conduction effects, 113

Safety
and fault detection in process control systems and sensors, 167
fire, are parents learning, from their children?, 143
Sensors
safety and fault detection in process control systems and, 167
Smoke
and gas evolution rate measurements on fire-retarded plastics with the cone calorimeter, 135
Smoke detection
very early, for computer and telecommunications industries, 13
Smoke flow
stratified, numerical study of, in a corridor: full-scale calculations, 287
Smoke venting
effect of, on the operation of sprinklers subsequent to the first, 221
Sound attenuation
in buildings: implications for fire alarm system design, 5
Sprinkler head
fire, discharge distribution performance for an axi-symmetric model of a, 101
Sprinkler heads
thermal performance of, 89
Sprinkler system
ESFR, development of, 65
Sprinkler technology
quick response, applications/limitations of, 75
Sprinklers
automatic, quantification of thermal responsiveness of, including conduction effects, 113
comments on "Thermal response of, Part II. Characteristics and test methods" and "Thermal response of, — a theoretical approach", 189
effect of smoke venting on operation of, subsequent to the first, 221
response to 'Comments on "Thermal response of sprinklers. Part II. Characteristics and test methods" and "Thermal response of sprinklers — a theoretical approach", 191
Systemic approach
some ideas on a, 193

Thermal detector spacing
use of computer fire models for analyzing, 33
Thermal performance
of sprinkler heads, 89
"Thermal response
of sprinklers, part II: characteristics and test methods, and, — a theoretical approach", comments on, 189
of sprinklers, part II: characteristics and test methods, and, — a theoretical approach", response to 'Comments on', 191
Thermal responsiveness
quantification of, of automatic sprinklers including conduction effects, 113

Venting
smoke, effect of, on the operation of sprinklers subsequent to the first, 221
